PROFESSIONAL SUMMARY

Pre-final year B.Tech CSE student (Expected 2028) and **Backend / Software Engineer** with 4 internships building **REST APIs**, **microservices** and scalable backend systems in **Java (Spring Boot)** and **Python (FastAPI)**. Strong in **Data Structures & Algorithms**, **distributed systems** (Kafka, Redis), **concurrency**, system design and databases (PostgreSQL, MySQL, MongoDB). LeetCode **Knight**: contest rating 1955, top 3.35% globally, 240+ problems solved. **Seeking SDE / Backend / Full Stack Developer internships (Summer 2027) and full-time roles.**

EDUCATION

College of Engineering Roorkee (COER) – B.Tech, Computer Science & Engineering

2024 – 2028

CGPA: 7.4/10 | Relevant Coursework: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Computer Networks

TECHNICAL SKILLS

Languages: Java, Python, C++20, SQL, JavaScript, TypeScript

Backend & APIs: Spring Boot, Spring MVC, Hibernate (JPA), FastAPI, REST APIs, Microservices, API Design, Multithreading

Distributed Systems: Apache Kafka, Event-Driven Architecture, Message Queues, Redis, Distributed Locks, Fault Tolerance, Scalability

Databases: PostgreSQL, MySQL, MongoDB, Redis, Query Optimization, Indexing, Schema Design

Cloud & DevOps: AWS (EC2, IAM), Docker, Kubernetes, Jenkins, CI/CD, GitHub Actions, Linux

CS Fundamentals: Data Structures, Algorithms, OOP, Operating Systems, DBMS, Computer Networks, System Design, Complexity Analysis

AI / ML & Tools: OpenCV, YOLOv8, Power BI, Git, GitHub, Agile/Scrum

WORK EXPERIENCE

Axonix Technologies – Backend Developer Intern

Aug 2026 – Present

- Design and develop scalable **backend services**, **REST APIs** and **relational database schemas** following clean-code and modern software engineering practices.
- Improve **reliability**, **code quality** and **maintainability** of production-oriented backend solutions.

FlyRank AI – Machine Learning Engineering Intern

Jul 2026 – Aug 2026

- Engineered **FastAPI microservices** handling **200+ concurrent inference requests** for production AI models.
- Optimized API response times and data pipelines, **reducing average processing latency by ~25%**.
- Implemented retries, error handling and monitoring to improve reliability of distributed ML model execution.

1M1B (1 Million for 1 Billion) – Green Skills & Applied AI Intern

Jun 2026 – Aug 2026

- Applied **AI and data analytics (Power BI)** to real-world sustainability challenges; collaborated in a remote team and communicated technical solutions clearly.

College of Engineering Roorkee – Software Development Intern

May 2025 – Jul 2025

- Developed **C++ and SQL** backend modules that automated manual report generation, **cutting processing time by 40%**.
- Refactored database queries and indexing strategies, **improving data retrieval performance by ~30%**.
- Delivered software modules end-to-end (design, implementation, testing) in **Agile** sprints within project timelines.

PROJECTS

FlowForge AI – Distributed Workflow Orchestration Platform | [GitHub](#)

Java, Spring Boot, Kafka, Redis, PostgreSQL, Docker, Kubernetes

- Built a distributed workflow orchestration platform with **Java and Spring Boot** to coordinate concurrent business workflows.
- Designed REST APIs and DAG-based execution with scheduling, retries, failure recovery and monitoring.
- Implemented asynchronous **Kafka** processing and **Redis distributed locking** for reliable concurrent task execution.
- Containerized services with **Docker and Kubernetes** for reproducible, scalable deployment.

TurboCache – High-Performance C++20 Cache Engine | [GitHub](#)

C++20, Linux, Multithreading, Networking

- Built an in-memory cache engine in C++20 with concurrent request handling, efficient memory management and low-latency access.
- Implemented **LRU eviction**, multithreaded processing and benchmarking; achieved **14K+ requests/sec** under concurrent load.

LuminaVision ADAS – AI Driver Assistance System | [GitHub](#)

Python, OpenCV, YOLOv8, FastAPI, Docker

- Developed a real-time computer vision system for lane detection, object recognition and collision-risk analysis.
- Optimized the pipeline to process live video at **~30 FPS**; built a FastAPI backend and telemetry dashboard for safety monitoring.

ACHIEVEMENTS & OPEN SOURCE

- LeetCode (Knight)**: Contest rating **1955**, global rank 28,650 / 884,439 (**top 3.35%**); **240+ problems** solved (DP, Backtracking, Graphs, Divide & Conquer) - [profile](#)
- GirlScript Summer of Code (GSSoC 2026)**: Accepted in Open Source and AI/Agents tracks; contributing to open-source projects.
- Amazon ML Summer School**: Shortlisted for the selection process. **EY National Competition**: Selected for Round 2.
- Microsoft**: 4 badges in AI and Copilot. **Walmart Global Tech**: Advanced Software Engineering Simulation.
